

Value Chain.

Having an ordinary box, or transport packaging from INAPA, is an incomparable difference. Packaging is an integral part of logistics — its choice affects costs and processes. We handle the entire value chain under one roof.

- 01 Consultation and analysis — we review the existing packaging, find weak points and propose improvements.
- 02 Packaging specification — packaging must fulfil protective, aesthetic and cost functions; we consider the product, handling, storage and climate.
- 03 Design and construction — experienced designers create a bespoke solution, a technical drawing and a prototype for testing.
- 04 Choice of printing technology — offset, flexo or screen printing, plus surface finishes (varnishes, embossing, lamination).
- 05 Production — starts after sample approval, with thorough output quality control.
- 06 Assembly — delivery in the agreed form, flat or assembled.
- 07 Logistics and storage — full-quantity or just-in-time deliveries, with sufficient warehouse capacity.

INAPA s.r.o. — a specialist in industrial packaging. The entire chain from drawing to dispatch without subcontractors.
