

Technology.

Technological equipment is the heart of every printer and packaging manufacturer — the quality of the machines directly affects the result and customer satisfaction. We channel most investment into modern production technology from premium German manufacturers.

01 PREPRESS AND DESIGN

- ◆ Esko software — top tier for the structural and graphic design of packaging.
- ◆ A technical drawing and a physical prototype for approval before series production.

02 PRINTING

- ◆ Offset printing on KBA and Manroland presses — six units including coating (dispersion and UV varnishes, special finishes).
- ◆ UV offset on standard and special materials — plastics, transparent films, in-mould labels.
- ◆ Corrugated board by flexo printing; small runs by screen printing.

03 DIE-CUTTING AND ASSEMBLY

- ◆ Flat and rotary die-cutting — Bobst automatics at the core of production.
- ◆ Grove laminating automatics for displays and laminated board.

Investment in printing and die-cutting technology was supported by EU structural funds. The result is a marked increase and standardisation of production quality.
